

Fencecoat Paint Mixing Instructions

As the drums are stored upright, the paint separates and settles to the bottom. There are two recommended ways to mix it.

Method 1

Use this method if you have access to an air compressor.

1. Attach a stick to an old hose on the air compressor.
2. Insert the stick and the end of the air compressor to the bottom of the drum.
3. Turn the air compressor on just enough to get the paint bubbling a little (be careful).
4. Let the paint bubble for five to ten minutes.

Method 2

Use this method if you do not have access to an air compressor.

1. Turn the barrel on its side and turn back upright.
2. Repeat 10 to 15 times.

NOTE: A common way to mix paint is attaching something to a drill bit and turning the paint inside. This method will not stir up the sediments from the bottom of the drum, resulting in an uneven finish.
