## What Are End Tensioners and End Buckles?

End Tensioners are used to tighten your Flex fence rail. End Buckles are used to terminate your Flex fence rail. Fences under XX' use an End Tensioner on one end and an End Buckle on the other end. Fences over XX' use an End Tensioner on both ends.

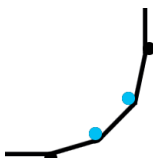

## What Makes Corners Different?

Ideally your Flex fence is on the inside of your posts, but on corners it wraps around the outside. The same brackets are used on a corner as on a straight line.
